

# Natural wood cladding for architectural applications

**Parklex<sup>®</sup>**

Product guide 2017

**Parklex products are made to withstand the most demanding weather and environmental abuse.**

**Facade** is a high-density laminated wood board for exterior cladding. It can be installed as ventilated façade, soffit, as louvres or overlapping slats and on suspended ceilings and curved walls.

Facade achieves the highest test results possible for organic materials in accordance with European and US regulations EN13.501 and US ASTM/NFPA for resistance to fire.

Exterior cladding

**Block Tek**  
Exterior decking

**Block Tek** – Finish: Cinder  
House in Roses, by Jordi Hidalgo i Tané (Roses, Spain)

**Block Tek is a high-density composite decking for exteriors, extremely resistant to weathering and the elements.**

Ideal for patios, walkways and outer perimeters of buildings. **Block Tek** is a strong, durable and hard-wearing natural wood floor with no need for ongoing maintenance or refinishing.

We use wood products to emphasize the natural beauty found in real wood; its feel and natural warmth, while combining it with modern technology to make it the perfect product for high-traffic areas.

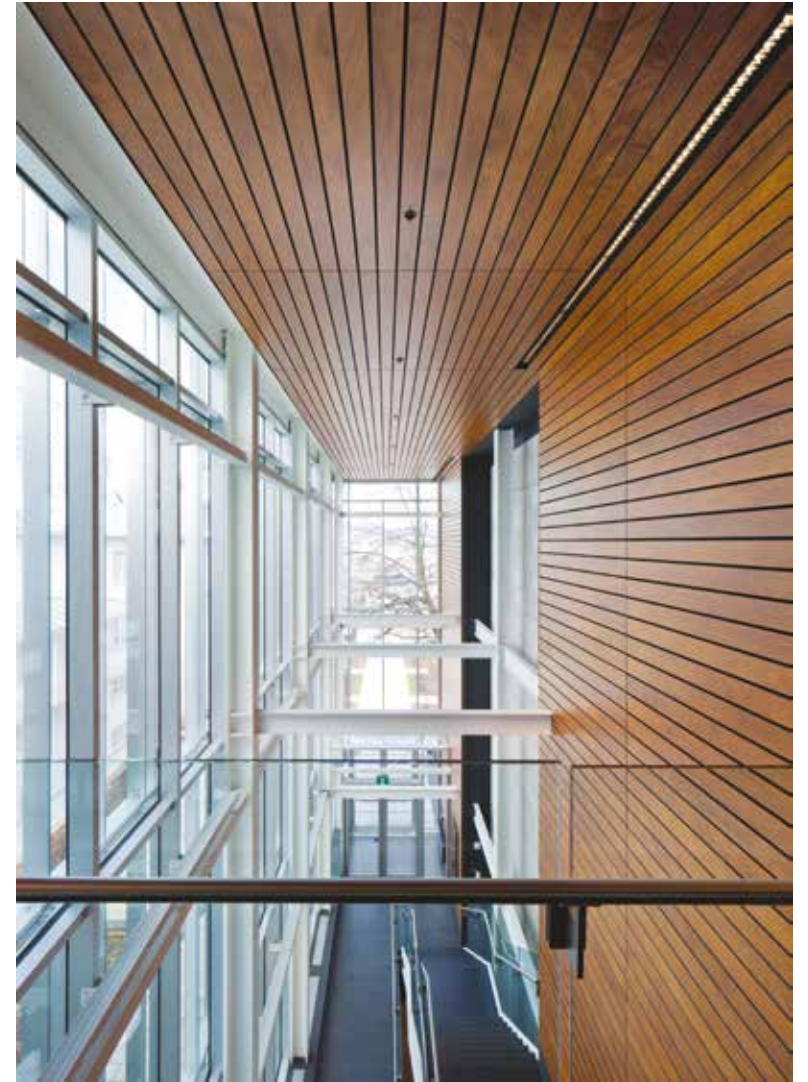

Hy Tek – Wood: Olivier Ash

Hy Tek  
Interior flooring

Multiple **Wall and Ceiling** solutions allow the finishing of dry internal high-traffic areas (**Dry Internal**) and wet areas where high humidity and moisture levels are present (**Wet Internal**). **Acoustic** is the perfect solution for projects which require sound attenuation and noise control.

Walls and Ceilings  
Interior cladding

Wet Internal – Wood: Copper  
Le Monastère des Augustines, by ABCP Architecture (Québec, Canada)

Hy Tek is a high-density composite wood flooring for interiors, ideal for high traffic areas such as museums, offices, hotels and other commercial applications.
